

Justin Christian Woeryadi

Artificial Intelligence Student – Binus University

Jakarta, Indonesia | justinchristian2607@gmail.com | +62 881 881 7799 | linkedin.com/in/utinn

ABOUT

I'm an Artificial Intelligence undergraduate at BINUS University with hands-on experience in machine learning and computer vision, building AI solutions to solve real world problems. Beyond my technical work, i actively contribute through competitions, mentoring, and leadership roles to enhance my skills in collaboration, communication, and management within team environments. Alongside AI, i also explore the broader software stack, including frontend development with React and JavaScript, as well as backend development with Python and FastAPI, allowing me to better understand how AI models can be integrated into complete applications.

EDUCATION

Artificial Intelligence (School of Computer Science)

Binus University

July 2024 – July 2028

GPA : 3.93 / 4.00 | Listed on the **Dean's List** School of Computer Science 2025

Science and Mathematics Track

Vianney High School

July 2021 – May 2024

Average Final Score : 88%-89%

PROJECTS

AgroSense | AI-Assisted Soil Health Support for Sustainable Agriculture

Tech Stack : Python, Scikit-Learn, Flask, React, Vite

September 2025 – August 2026

- Developed an ensemble learning model combining XGBoost, Random Forest, and MLP to classify five soil pH categories, achieving a Macro F1-Score of 89%.
- Applied hyperparameter tuning and oversampling to enhance class-wise performance consistency and achieve more balanced classification results across five soil pH categories.
- Integrated the trained machine learning model with a Flask backend and React frontend, enabling real-time soil pH predictions through a web application.

EOTRNet | Smart Traffic Security and Surveillance System

Tech Stack : Python, YOLOv8n, ByteTrack, SQLite, FastAPI, Streamlit

February 2026 – June 2026

- Developed a traffic monitoring system with computer vision to detect and track multiple vehicle types from live surveillance footage and identify both correct-way and wrong-way vehicle movements based on predefined directions.
- Integrated YOLOv8n with ByteTrack for multi-object vehicle tracking, supporting fast inference that is suitable for real-time video detection while maintaining track continuity.

- Applied SQLite database for storing tracking records and feed, enabling historical data retrieval for subsequent monitoring, analysis, and evaluation.

ORGANIZATIONAL EXPERIENCES

Manager of Responsi

HIMTI Binus University

February 2026 - Present

- Managed a 50+ member Responsi Division by coordinating role allocation, class planning, and monitoring team performance while providing guidance throughout each program cycle.
- Redesigned the mastersheet system into a structured workspace, improving program visibility, task ownership, and resource accessibility while reducing operational complexity.
- Conducted regular evaluations and quality improvements to enhance program effectiveness, content quality, and student engagement in future Responsi programs.

Scholarship Academic Mentor | Binus University

Binus University

October 2025 – January 2026

- Mentored 10 students through structured academic support, with multiple mentees reporting improved grades and successful exam outcomes.
- Delivered 10+ structured mentoring sessions with 100-minute per session focused primarily on midterm and final exam preparation alongside concept reinforcements to maximize overall academic performance.
- Maintained a supportive and adaptive learning environment to encourage students and maintain an engaging mentoring experience

ACHIEVEMENTS

Top 10 Finalist

Fortex 6.0 | Al Azhar University

January 2026

- Developed an ensemble machine learning model by combining XGBoost, Random Forest, and Multi-Layer Perceptrons to predict soil pH categories from soil structure and composition, achieving a Macro F1-Score of 89% and placed on top 10 finalists of Fortex 6.0

Finalist

Srifoton 2025 | Sriwijaya University

October 2025

- Developed a deep convolutional neural network capable of detecting respiratory diseases from chest X-ray images, achieving a Macro F1-Score of 97–98% and got selected as a finalist among 63 teams.

SKILLS

- **Programming Languages** : C, C#, Python
- **AI / Machine Learning** : Scikit-Learn, PyTorch, OpenCV, Ultralytics
- **Frontend** : HTML, CSS, JavaScript, React, Vite
- **Backend** : FastAPI, Flask, REST API
- **Tools** : Git, GitHub
- **Deployment** : Vercel, Docker
